About WBIA and the Global Market Report

World Bicycle Industry Association (WBIA)

WBIA was founded in December 2017 and its members are Bicycle Industry associations from all over the world. WBIA currently consists of People for Bikes (USA), Taiwan Bicycle Association (TBA), All India Cycle Manufacturers Association (AICMA), the Bicycle and Motorcycle Industry Association of Russia (NADBM), Industry association of Mexico (ANAFABI), Bicycle Association Japan (BAJ) and CONEBI (Europe).

The World Bicycle Industry Association (WBIA) represents the Bicycle, E-Bike and Parts & Accessories Industries before the global intergovernmental institutions. It is an independent platform for sharing best practices among the WBIA members with the aim to reinforce the Cycling advocacy globally

as well as for discussing any relevant topic that has an industrial perspective.

WBIA Global Market Report

The first-ever WBIA Market Report includes data on global bicycle industry developments. The information for the report has been gathered thanks to the intelligence collected by the national associations within and beyond WBIA as well as the Bicycle Industry Experts all over the world. In several cases, import and export information from the public authorities were used to supplement the data.

The report provides the best available industry estimates, taking into consideration differing legislations on e-bikes and various levels of data availability throughout the world.

Introduction by the WBIA Board of Directors

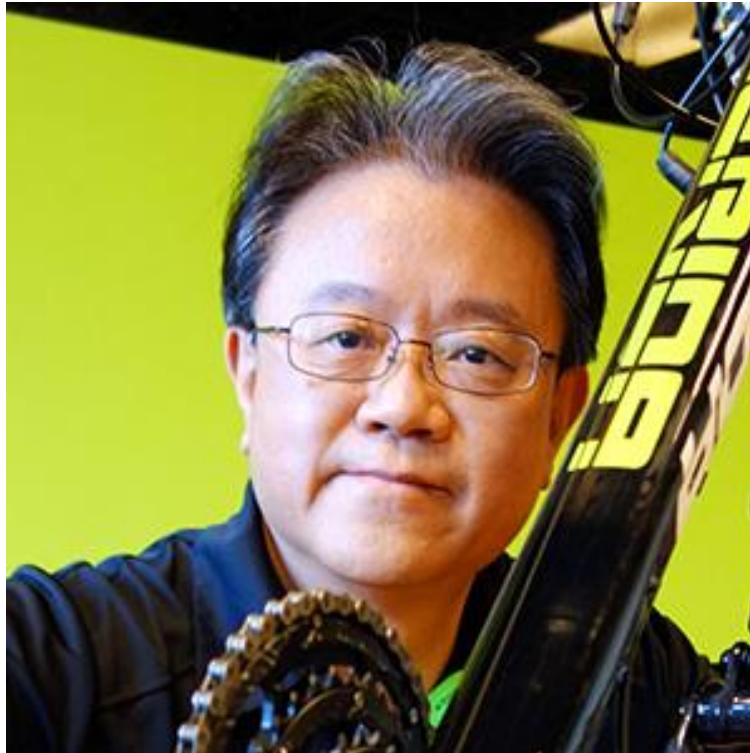

Foreword by the WBIA President Erhard Büchel (CONEBI)

I am delighted to present the first-ever WBIA Global Market Report with 2021 data. The report shows us that 2021 was yet another successful year for the bicycle industry; and we are happy to see the interest for cycling growing all around the world.

At the same time, we know that there are challenges ahead, caused by the multiple crises that the world is facing at the moment. However, the global bicycle industry has all the reasons to remain confident. Bicycles and e-bikes are a ready-made solution for many of the issues that people are struggling with. Cycling has tremendous environmental

benefits and as a carbon neutral means of transport, it provides a simple way towards mobility decarbonisation. Importantly, bicycles are accessible and affordable - two characteristics that are extremely important at a time when energy bills and other costs are forcing many to limit their spending.

Nobody knows what the future will bring but I am certain that the bicycle industry will continue to flourish, as cycling is growing more and more important. And I wish that the WBIA Global Market Report will become one of the flagships of the WBIA, reporting on the growth for years to come.

Foreword by the WBIA Treasurer Michael Tseng (TBA)

Global bicycle industry and market development have undergone great changes under the impact of the COVID-19 pandemic. Even in such difficult times, Taiwan has always been supportive of healthy cycling and the positive development of the industry by doing its very best to contribute to the world. We are

very privileged and fortunate to have WBIA, a great organization that led all the regional players to move forward in a more innovative and visionary direction. I believe that WBIA Global Market Report will contribute to the global bicycle industry and provide more holistic business assistance for those in need.

Foreword by the WBIA Board Member Shinji Hara (BAJ)

The usage of bicycle is largely separated into 2 kinds. One of them is a means of transportation for commuting to work, school, shopping and so on, and the other is a tool for enjoying cycling for sports, exercise, and leisure.

The former is a major part in Japan. In this area, we will further promote the use of bicycles including e-assist bikes, which is an eco-friendly means of transportation for a sustainable society. In order to support this,

we will work on the safety promotion regarding both the environment of the roads for the bicycles and bicycle itself.

As for the latter, the establishment of cycling roads has been spreading throughout in Japan where we can enjoy beautiful natural view and wind, triggered by the enactment of the Act on Promotion of Bicycle Utilization in 2016. To use this chance, we are taking several measures to expand the cycling population that also contributes to health promotion

Foreword by the WBIA Board Member Larry Pizzi (PeopleForBikes)

Products have reached the U.S. market at increasing rates during 2022, often meeting decreased demand. While the overall market has maintained value compared to last year, this is largely due to increased prices paid by customers. While cycling participation remains above pre-pandemic levels, retail sales reports show unit sales of bicycles for every category below pre-pandemic levels. As retail sales have declined, inventories have increased significantly, leaving dealers and brands with significantly larger inventories than any previous year.

Looking to 2023, inventory gluts and macroeconomic trends will likely define the market. Americans seem keen on continuing

the pandemic market trend of purchasing more consumer goods. Still, rampant inflation is leaving households with less discretionary income to spend on increasingly expensive bicycles. A recent study of bicycle industry members conducted by PeopleForBikes found that 50% of respondents expect 2023 sales to fall below those of 2022.

Still, the electric bicycle market shows promise. The electrification rate of the U.S. bicycle market continues to slowly grow as policies and regulations at the federal, state, and local levels support the purchase and use of electric bicycles. This is one area of the market which continues to see significant growth and will likely continue to do so.

Global Overview

Production

Bicycles Production (thousands of units)	Japan	Korea	Mexico	Argentina	Brazil	China	Europe	US	India

2019	958	40	8	23	32500	3397
2020	1102	78	9	33	32500	4537
2021	1249	107	7	43	32500	5057

E-bike sales (thousands of units)	US	India	Switzerland	Norway	Australia + New Zealand	Total
2019	124					
2020	295					
2021	420	1	200	100	50	39733

*Data for China includes e-bikes with open-throttle with sales of such e-bikes estimated at 30 million units. The total sales of e-bikes with pedal assistance in 2021 can therefore be estimated at **9.7 million units**.

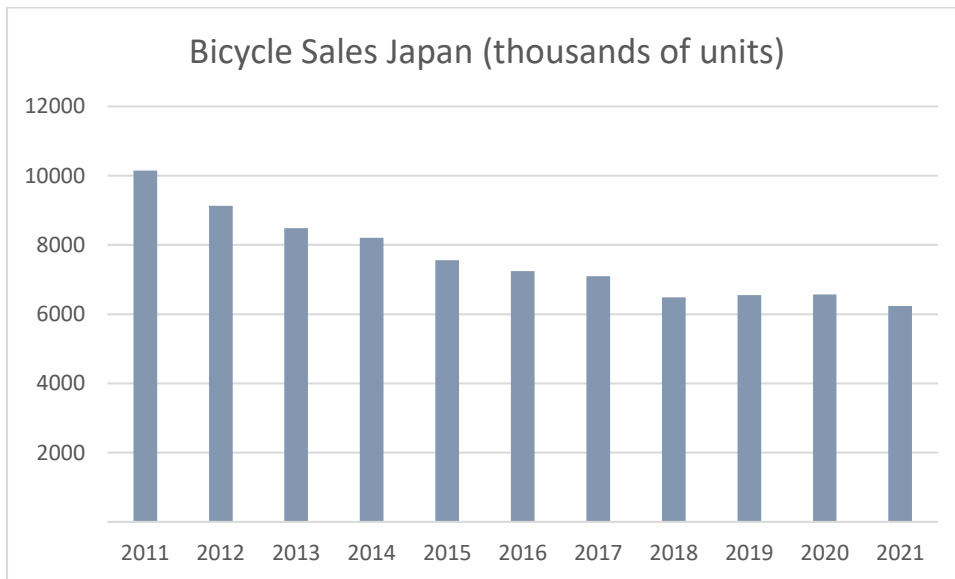

Country overviews

Japan¹

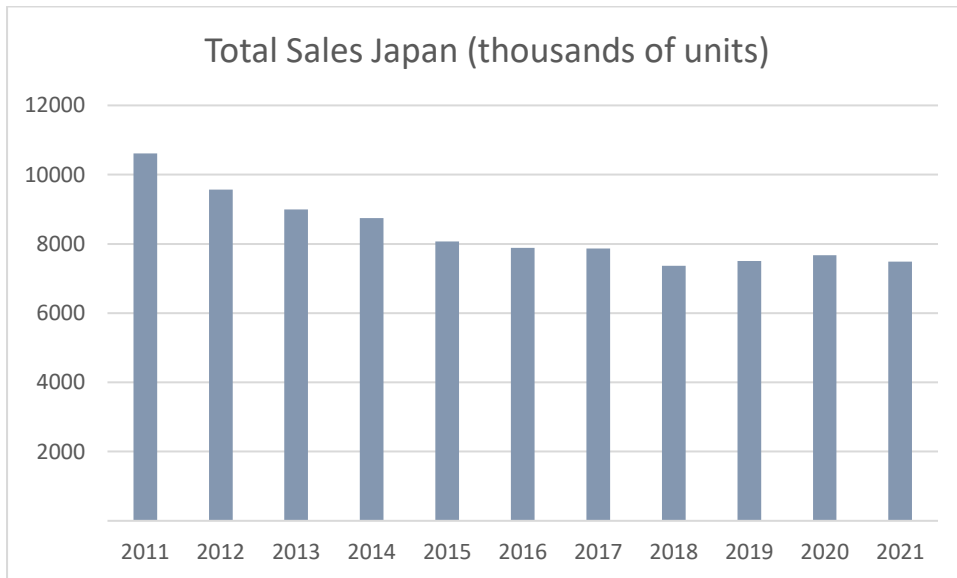

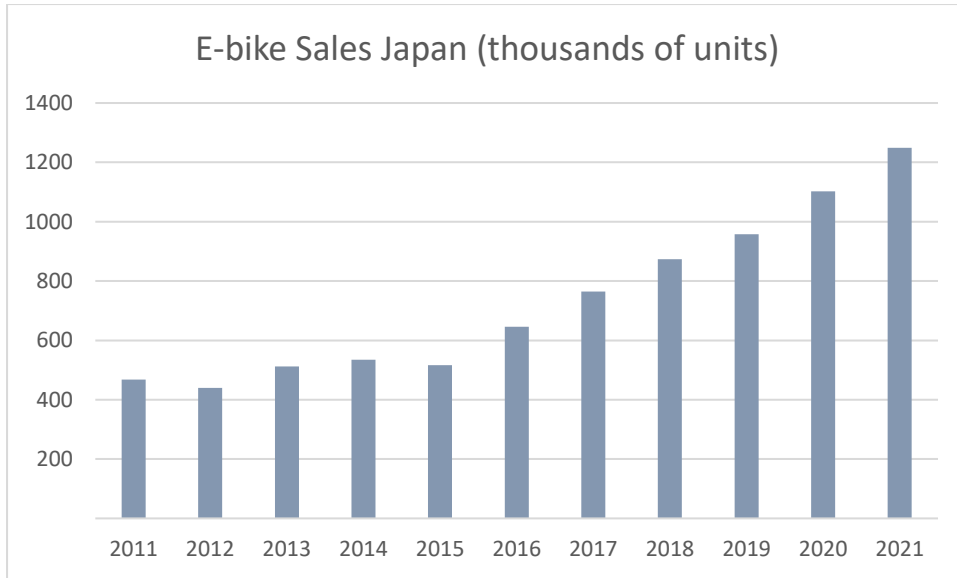

Sales²

¹ Data provided by BAJ.

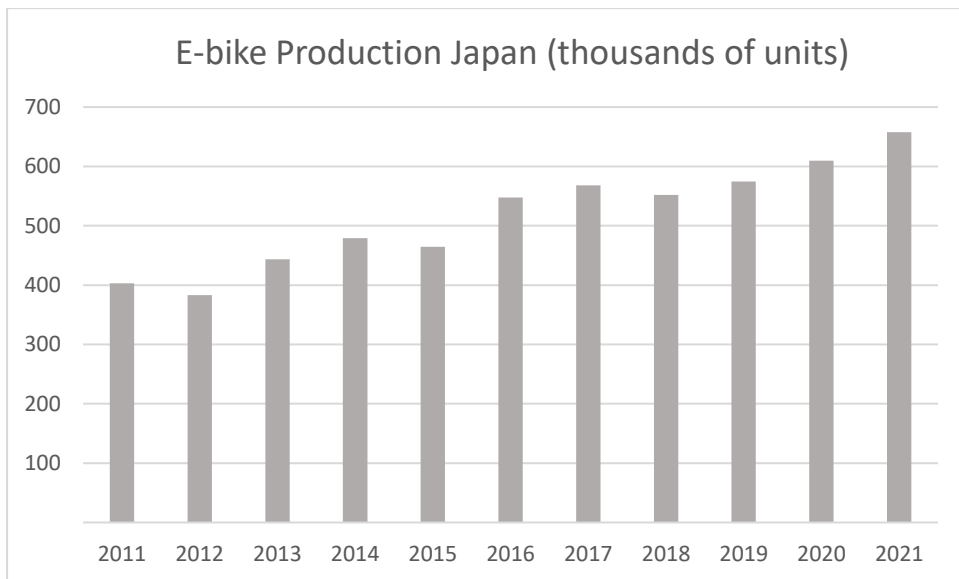

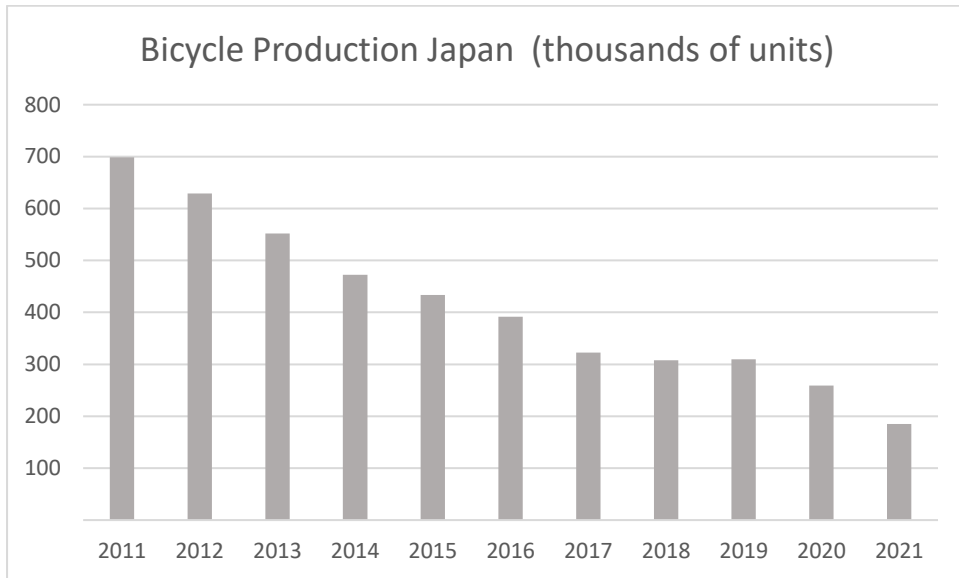

² The sum of the total number of production and the total number of import is used as a sales index in Japan. For import units, the data for e-bikes includes not only e-bikes but also other vehicles (for example: electric scooter and Electric kickboard) since the HS code 8711.60 combines these categories. Therefore, this data includes electric scooter and electric kickboard etc.
